## Patient Visit Flow Process with Routine HIV Screening

Front desk greets patient and determines whether they are an appt or walk-in. Walk-ins are offered a same day appt if available (then proceed as an appointed patient). Front desk registers the patient, verifying insurance and demographics. Co-pay collected, if appropriate. Encounter form is printed and attached to medical record for pick-up by nursing staff.

Nurse escorts patient to vitals area for weight, temperature, and blood pressure. **RAPID HIV SCREENING** offered and, if accepted, sample obtained and transported to lab for processing.

Patient escorted into exam room by nursing staff. Provider performs clinical exam; orders necessary follow-up visits and/or referrals. HIV Rapid Test results given by nurse or provider (in all cases when reactive). Nurse returns to exam room if indicated by provider.

If blood work necessary, provider writes an order. Patient carries lab request to the lab for blood draw.

Patient takes encounter form and proceeds to check out area for scheduling of next visit.

*\*If vitals obtained in exam room, this step is eliminated.*

*\*\*If labs drawn in exam room, this step is eliminated.*

*\*\*\*If checkout done in exam room, this step is eliminated.*
